A Finnish company is looking for distributors and licensing partners for their unique second generation antimicrobial silver wound dressing.

A Finnish company has developed second generation silver wound dressing for infection prevention. The product is safe, easy to use, affordable, and not leaching silver to the wound. Unique features allow wide use of antimicrobial dressing to prevent wound infections. Nonwoven fabric contains antimicrobial and absorbent fibers. Dressing can be used as such or together with other wound dressings. The company is looking for distributor service agreements to distribute the certified product and to take care of sales and after sales in their markets. They are also interested in licensing agreements which would allow the product to be integrated to related products sold under client's brand.

Finnish company specialized in designing and manufacturing remote control vehicle platforms is looking for distributors and agents in Sweden, Germany and France and offering a licence in UK and Italy.

An innovative Finnish engineering company specialises in different kind of technical solutions. One of the concepts is a radio control

multipurpose vehicle platform. It is designed for rough terrain and harsh climate environments. The Finnish company is now serious about expanding internationally and is seeking distributors and agents in Sweden, Germany and France. It is also offering licensing in UK and Italy. The platform is now used as a harvester, but can be used in the fire, rescue, military or construction industry. The platform is designed as multipurpose tasks; it is easily modified to different segments. In the forest industry the platform has a unique advantage - harvesting is profitable (low cost platform) and harvest tracks are clean, because the platform is light. Forest owners like to have a clean forest; this is also sustainable green forest thinking. The platform can use normal timber harvesters and cranes.
